Received and published: 12 July 2016

We would like to sincerely apologise for the delay in this response as we are still working out the appropriate timelines with the interactive discussion and presumed it to be closed once your review was received.

You raise many valid points, both on technical issues and when taking into consideration a the bigger picture that the article tries to disseminate. We see your review as an in depth and structured assessment of our article and thus will take every measure to address your points in our revised manuscript, making note of each change.

We hope you are pleased with your revised version when it is completed.

Best wishes
