

## ***Interactive comment on “Aerodynamic Performance of the NREL S826 Airfoil in Icing Conditions” by Julie Krøgenes et al.***

**Anonymous Referee #2**

Received and published: 28 November 2017

Dear Editor and authors.

In my opinion the manuscript requieres major revision as well as complementary work to be considered for publication.

I propose a complementary analysis that you could include in your paper to enhance the scientific/technical relevance of your work.

I have proposed to reconsider the paper after major revisions because I think that if you include the additional analysis that I suggest the resulting piece of reserach can be more interresting for the wind energy community.

Please see the attached pdf file.
