Interactive comment

## Interactive comment on "Extending the life of wind turbine blade leading edges by reducing the tip speed during extreme precipitation events" by Jakob I. Bech et al.

Jakob I. Bech et al.

jakb@dtu.dk

Received and published: 26 February 2018

Please note, that manuscript for review and discussion was updated on Friday 23rd of February. The updated version has 31 pages (the old one had 35 pages).

The updates are mainly correcting some errors in numbering and cross references for tables and figures. I also adjusted the size of a few figures to eliminate the half-blank page and make the review version more reader-friendly.

With kind regards

Jakob
