Received and published: 23 August 2018

Thanks for your response to the referee comments. Looking forward to the updated version of the manuscript. Please remember to mark by color the changes you have made in the manuscript and indicated in your author response to the referee how you have addressed each of the point raised by the reviewers. This will make it much easier for the two reviewers to judge whether all their points have been addressed. It is preferable to use a color marking instead of just use the track-changes feature in e.g. MS-word, as it in the case of many corrections will make the manuscript difficult to

read.
