

Interactive comment on “Exploitation of the far-offshore wind energy resource by fleets of energy ships. Part B. Cost of energy” by Aurélien Babarit et al.

Anonymous Referee #2

Received and published: 30 April 2020

This paper analyzes the LCOE of a novel offshore wind concept. Though I have questions about the technical viability and design of the concept, that seems to be the subject of the first paper. This paper focuses on LCOE, and I found the analysis to be extremely clear and well presented. There are a few minor typos included in the attached. But overall the paper is well organized and very well written.

Thus, assuming the first paper is accepted with respect to the technical design and analysis, then this companion paper should be published as well.
