Dear Remi,

thank you for your comments. I have gone through them and agree that answering them will clarify the manuscript. I will wait with a detailed response until the referee comments arrive, as coordination with all co-authors takes time.

I can give some general answers: NDBC buoy 44008: We used an XML file published by the NDBC to choose relevant buoys and some of the "moored buoys" are incorrectly labeled. We corrected some, but missed 44008.

Badger et.al. (2019): The paper was submitted already in November 2018 and we hope that the review process would be done by now, but it took much longer than

expected. We are in the review process now and will resubmit this soon. I will post the paper at once, when it is accepted to give access to the pre-print.

Best regards,

Tobias Ahsbahs
