

## ***Interactive comment on “Ducted wind turbines in yawed flow: A numerical study” by Vinit Dighe et al.***

### **Anonymous Referee #1**

Received and published: 7 October 2019

Performance of the two different duct shape has been investigated for different yaw conditions. A verification study has been carried out. The performance of cambered duct shape is more than the non cambered duct shape with different yaw angles.

Its a good work.
