

# **Review of *Ducted wind turbines in yawed flow: A numerical study* by Vinit Dighe et al. (R5)**

Reviewer: M. Paul van der Laan, DTU Wind Energy

Thanks the for corrections. I have two suggestions for the newly added content.

## **Minor comments**

1. Page 8, Line 25: I believe you should refer to Appendix B (not Appendix A). It seems that you forgot to refer to the blockage study of Appendix A in the text.
2. Appendix A: It is great that you have added results of the center line velocity for two different domain sizes. It would probably be more relevant to report the effect of the domain size on  $C_{TD}$ , similar to the grid refinement study. In addition, I would recommend to use at least three domain sizes, each with a factor two enlargement.
