Received and published: 19 January 2021

Dear referee 2, We, co-authors of the present manuscript, are currently preparing their final response to your comments and we would like to ask you for additional information regarding your following comment : "There are some additional yaw models not discussed in the literature review that should be included, particularly in terms of computing the behavior of the wake centerline and in capturing the yaw dynamics (which the authors claim has never been done)." Indeed, we might not have been fully exhaustive in our literature review but it is not clear to us which missing papers that you would like to see added. Would it be possible to indicate us explicitly the references that
