This was an interesting paper on a topic of great interest to the industry right now looking at extending the life of assets whilst minimising operational costs. A few small notes I picked up during the review:

Line 13 – Define CM as corrective maintenance Line 41 – Would ‘mobilization costs’ work better than ‘set-up costs’? Line 88 – OM isn’t clearly defined in the paper – might be worth clearly stating as ‘operational maintenance’ Line 203 – May be worth stating this relates to onshore wind farms – 20 years seems low for an offshore project.

Kind Regards, Miriam Noonan
