

***Interactive comment on* “Subsea cable management: Failure trending for offshore wind” by Charlotte Strang-Moran**

Charlotte Strang-Moran

charlotte.strang-moran@ore.catapult.org.uk

Received and published: 24 September 2020

I acknowledge that I cannot make all the changes required from the referees. The following are highlighted areas from comments that I can amend: – Line 49 - Creyke Beck is no longer being used, Dogger Bank A, B and C – Line 171 – add explanation to why LCoE has been chosen instead of CfD – Line 220 – strengthen explanation of why 2-3m burial depth is mentioned – Add explanation to why current available open source data is not representative of the industry

I understand that the paper does not provide contributions as a scientific paper. After positive feedback from the conference the next step was to input a paper. Due to the level of data able to be published at this time, it is not possible to elaborate the

methodologies further and provide more technical input. Therefore, it may be more suited for a different journal, or published independently.

Additional changes: â€” Correcting/updating terminology for root causes and failure modes.
