

Interactive comment on “Subsea cable management: Failure trending for offshore wind” by Charlotte Strang-Moran

Anonymous Referee #2

Received and published: 18 September 2020

The topic of the paper is of importance for the wind energy community. Submarine cables are a very important component and it can have significant impact on the generation. The initiative of collecting such data is laudable and of utility to the community. In this sense, is very important to communicate and disseminate the results. From a scientific perspective, the paper does not manage to highlight its contributions. The methodology section is very short and, in general, the paper is rather descriptive than scientific. While I find it very interesting and important topic, I think it will be more appropriate to be published as a report rather than a scientific paper.
