Review Comment

The authors have provided a revised manuscript which properly addresses the main remarks made during the first review. During the second review, two small additional comments are raised: First, the derivation of equation 7 should be explained in more detail, either by including the entire derivation in Section 2 or by adding the derivation to an appendix. Second, the procedure followed for the investigations carried out in Section 6 could be clarified, see the comment in the accompanying document. Final technical corrections and suggestions for editorial changes are also made in the accompanying document.

Authors Answer & Actions

We added an equation for the derivation of Eq. 7 and clarified how the investigations of Sect. 6 are carried out. Thanks again for your review.
