

Review

I believe the changes made by the authors have further improved the manuscript and it is now ready for publication.

I only have minor editorial comments:

l. 378: "...from $x D^{-1} = 1.5 D$ " remove one of the Ds

section 4.3.1: I found the varying signs of $u^2 w$ in this section somewhat hard to track, I think it would be easier to stick to a single sign.

l. 431: "... observed in Fig. 11(b)", I think you mean fig 11(a).

l. 431: "...enhancement of the region of positive $u^2 w$ ", I believe it should be $-u^2 w$
