Evaluating the potential of short-term instrument deployment to improve distributed wind resource assessment by Sheridan et al

The authors have adressed all my comments and I recommend to accept the paper. Two minor and optional suggestions:

- Make a reference to Section 3.5 in Section 3.1 (or maybe better; merge results for ERA5 and GWA/WTK, i.e. show GWA/WTK results in same figures as ERA5 in 3.1 + move description of these to Section 2)

- Better to cite the original algorithm (random forest, gradient boosting etc.) rather than Matlab implementation (although a bit difficult to understand from a quick look, maybe Matlab has its own algorithms?)
